

## HSEQ INTEGRAL MANAGEMENT SYSTEM

Our company relies on the bases and application of an industrial safety, environment, occupational hygiene and quality management system to establish the necessary criteria and tools that contribute to improve the quality of life at work, taking into account the impact exerted on employees by their professional setting and the various environments in the workplace. We are responsible for ensuring that employees under our supervision and authority comply with this policy.

Management has assigned compliance responsibilities to some employees. Compliance personnel will assist PRODATA ENERGY employees in understanding and complying with this policy and take the necessary steps to execute and maintain an anti-corruption program. However, the responsibility for compliance will continue to reside primarily with PRODATA ENERGY employees.

The strength of a company's commitment to quality, health, safety and environment is determined by the conviction of its management and the implementation of its HSEQ system by all of its employees. We are determined to be a leader in performance in our operational segments. Our integrated HSEQ management system defines the principles that drive our operations, as well as allows us to focus on our quality of service, which is part of our philosophy and culture of operational excellence.

Industrial safety, environment, occupational hygiene and quality management allows us to continuously improve our processes as part of the core of HSEQ, to then implement the opportunities for improvement that arise in all the processes of our organization through continuous monitoring and evaluation..
